

Doctor Discussion Guide

- 1) What treatments are available to help reduce the frequency and/or severity of seizures?
- 2) Would taking an additional medication help with seizure control?
- 3) What should I know about suicide risks with all antiepileptic drugs (AEDs)?
- 4) What should I know about risks associated with taking AEDs?
- 5) Could adding another AED to my loved one's existing medication help reduce seizures?
- 6) What should I do if my loved one misses a dose of one or more of his or her medications?
- 7) What are the side effects of taking multiple medications for seizure control?
- 8) What should I do if my child experiences a side effect with his or her medication?
- 9) Could certain vitamins, dietary supplements, or other medications affect how medications for seizures work?
- 10) Could a special diet help my loved one?
- 11) Could surgery help my loved one and, if so, what are the risks?
